## Algebra 2 Sequence And Series

2,4,6,8,10....is an arithmetic sequence with the common difference 2. If the first term of an arithmetic sequence is  $a_1$  and the common difference is  $d$ , then the  $n$ th term of the sequence is given by:  $a_n = a_1 + (n - 1)d$ . An arithmetic series is the sum of an arithmetic sequence. We find the sum by adding the first,  $a_1$  and last term,  $a_n$ , divide by 2 in order to get the mean of the two values and then multiply by the number of values,  $n$ :

### Algebra 2 - Arithmetic Sequences

A sequence is a series of numbers, the sum is always all added up together. And to find the sum of a geometric series we have a number of different equations at our disposal, okay? So what we have is for a finite series, okay, that is a series with a set number of terms, we have these 2 equations at the top of the board.

Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by  $f(0) = f(1) = 1$ ,  $f(n+1) = f(n) + f(n-1)$  for  $n \geq 1$ . WORKSHEETS: Regents-Sequences 1a A1/All/A2 difference or ratio, MC:
