Diffusion Through Membrane Lab Answers

Explain why some substances were able to pass through the membrane while others were not able to. Only some substances were able to pass through because the cell is semi-permeable and will only let certain substances pass through. The membrane will allow small particles to pass through, while large molecules, such as starch, cannot.

Diffusion Through a Membrane Lab Flashcards | Quizlet

True or False: The process of diffusion is a movement of molecules from an area of greater concentration to an area of lower concentration. Diffusion Through a Membrane State Lab DRAFT 7th - 9th grade

What are the answers to the new york state diffusion ...

in many animals, glucose, rather than starch, is transported by the blood through the body to all the cells. starches in many foods are digested to yield glucose. based on what you learned in this laboratory activity, explain why the digestion of starch to glucose is necessary. starch molecules are too large to diffuse through the membrane.

Study 19 Terms | diffusion through a... Flashcards | Quizlet

In most cases, they move through the cell membrane through a process called diffusion. Diffusion is the movement of molecules from an area of higher concentration of those molecules to an area of lower concentration. A good metaphor for this movement of molecules is what happens if you were to open a bottle of perfume in one corner of a room.
