In industrial processes, mass transfer operations include separation of chemical components in distillation columns, absorbers such as scrubbers or stripping, adsorbers such as activated carbon beds, and liquid-liquid extraction. Mass transfer is often coupled to additional transport processes, for instance in industrial cooling towers. These towers couple heat transfer to mass transfer by allowing hot water to flow in contact with air.

NPTEL :: Chemical Engineering - Mass Transfer Operations I
This was the first book (1955) to identify "Mass Transfer Operations" as a discipline that is distinctly Chemical Engineering. (Although Unit Operations was the first Paradigm in Chemical Engineering, the early Unit Operations textbooks borrowed heavily from Hydraulics of Civil Engineers, Heat Transfer from Mechanical Engineering and Mineral Dressing of Metallurgical Engineering).

THE MASS-TRANSFER OPERATIONS A substantial number of the unit operations of chemical engineering are concerned with the problem of changing the compositions of solutions and mixtures through methods not necessarily involving chemical reactions. Usually these operations are directed toward separating a substance into its component parts.

Mass Transfer Operations by Robert E. Treybal
6.1 Mass Transfer Fundamentals A group of unit operations for separating the components of mixtures is based on the transfer of material from one homogenous phase to another. The driving force for transfer is a concentration difference or a concentration gradient; much like a temperature difference or a temperature gradient provides the driving force for heat transfer.
