NX Nastran for simulating exterior noise propagation from a vibrating surface. NX Nastran is part of the Simcenter™ portfolio of simulation tools, and is used to solve structural, dynamics and acoustics simulation problems. The NX Nastran Advanced Acoustics module enables fully coupled vibro-acoustic analysis of both interior and exterior

### NX Nastran Advanced Acoustics - FEM und CFD

This tutorial uses a fitting model to illustrate a simple linear static analysis. It introduces the following: Autodesk Nastran In-CAD user interface. Learning the basic steps to create and analyze a simple part model. Using multiple load cases for a static analysis. Displaying analysis results, post-processing. The bracket is made of alloy steel. The back face is fixed and the load is applied ...

We are surrounded by sounds, some pleasant, and quite a few that are not. In order for a product to be accepted by customers, manufacturers must pay close attention to its acoustic signature, both for branding purposes and to limit noise pollution. Engineers must also consider the noise regulations that govern their industry, prior to product release.
