USP Chapter 41: Accuracy According to the current USP Chapter 41, the "Accuracy" part of the test describes the quality of the weight to be used. One measurement is taken with a single test weight, which is required to have a mass between 5% and 100% of the balance's capacity. The deviation of the measured value should be within 0.10% of the test weight value and the measurement uncertainty of the test weight shall not be more than one-third of 0.10%.
